Commissioner

Project Description

Nelson & Pope prepared construction documents for the development of three synthetic-turf baseball fields and a soccer practice field for the Town of Oyster Bay. N&P analyzed the subsurface soil conditions and designed a stormwater retention area that would allow for the storage of a five-year storm event, then overflow through a weir and safely discharge into the adjacent wetland. The project included field layout; sports lighting; new utilities and utility relocations; new restrooms; parking lot modifications; contaminated soil clean-up and batting cages & scoreboards.

Relevant Project Components

- Topographic Survey & Mapping
- Subsurface Utility Investigation
- Soil Borings
- Grading and Drainage Design
- NYSDEC Wetlands Permitting
- Three-Dimensional Renderings
- Utility Relocation Design
- Outfield Fence Design
- Construction Resident
- Shop Drawing Review
- Review of Contractor Payment Requisitions
- Construction Survey & Layout
- Preparation of As-Built Plan
