

OLD FIELD ROAD SHORELINE & BLUFF STABILIZATION

Village of Old Field, NY

Project Description

Nelson & Pope, in conjunction with Nelson, Pope & Voorhis, prepared shoreline and bluff stabilization plans to control erosion at a residential home located on the Long Island Sound. Permit plans were prepared to secure permits from the New York State Department of Environmental Conservation and Village of Old Field. The scope of work included a stone revetment to stabilize the shoreline and re-grading and vegetation of the bluff to control erosion. A stairway from the top of the bluff to the beach was designed to provide the homeowner access to the beach.
